This is a great story of adventure and challenging paradigms of both cultural relativism and how paradigms can be radically driven by cultural materialistic circumstances.

I was happy to see this book again as I had read my old copy to death. I am a fan of this writer and have most of what he has written over the years.

★★★★★ **An excellent merger of alternate histories & space travel.**

Format: Mass Market Paperback

A young engineer is embroiled in the machinations of two competing probability traversing cultures- one human , one neanderthal. Utilising his knowledge of our space program he seeks a resolution of the conflict. A fast paced story which competently merges two of the major themes of SF. Much the best of M. McCollum's work. A sequel would be most appreciated, expanding on the linear time travel & truly alien civilisations hinted at towards the end of the story.

★★★★★ **One of my all-time favorites**

I bought this book used at a public library book sale. Since then it has been one of my all-time favorite books. Time travel, "sliding", warring races - it had elements which I thoroughly enjoyed and shared with my brother who also loves the book. My copy is worn from being read several times over.

★★★★★ **If you like the TV show "Sliders" this book is up your alley**

The similarities between this book and "Sliders" are amazing. Even has an advanced neanderthal race bent on multi-dimensional conquest like the Cromags in "Sliders". I wonder if the people who thought up "Sliders" have read this book?
