**Verified Purchase**

I really enjoyed this book. I grew up reading hard science fiction (Heinlein, Larry Niven) but hadn't read any in a long time. This reminded me why I like the genre. Many writers would just say "hyperdrive" but the author postulates on the physics that would be required for faster than speed of light. He then imagines what that does for distances and limitations (4,000 light years away is still really, really far). I really enjoyed his vision on what the human race would be like in 2,000 years of space travel. Great book, look forward to reading the rest of his previously published books.

**5.0 out of 5 stars** **A solid hard sci-fi read.**

**Verified Purchase**

Picked this up to read during my infusion, well worth it. In a modern market largely bereft of hard science fiction, this novel delivers the goods. The front 1/3 lags a bit, but it's hard sci-fi so that's to be expected. It's kind of like Foundation light, like, if you wanted to read Foundation with less conflict; and all in one novel.

That's not a criticism, it worked.

**Verified Purchase**

Entertaining and thought provoking. I don't think I have seen a similar idea on a method of hyper-space

Jwh Fitzherbert

**5.0 out of 5 stars** **Excellent**
